This Wallis Islands Dx-pedition was conceived and conducted by WB6LTJ, K6YFZ, and K6RIR during their vacation from work.

Wallis Islands are surrounded by an oval coral reef 25 km in length and 15 km in width, dotted with very small islands, in the center of which lies the main island of Uvea. The capital city is Mata Utu. On front is pictured our hotel room where all operations were carried out. The weather was 85 to 90 degrees F with 90 percent plus humidity. The French and Wallisiens were friendly and helpful and didn't say a thing when we climbed everything in sight to hang wire. During the two weeks on Wallis, approximately 9000 QSO's were made on all bands including the 2086 QSO's during the 1974 CQ WW DX TEST CW. Tnx to all who contacted us to make this Dxpedition successful.
